Subject: **Medisize Expands Thermal Welding Bag Making Capability**

Medisize, a manufacturing partner of custom-made, single use drug delivery devices, primary pharmaceutical packaging and medical and diagnostic devices, has expanded its thermal welding capabilities at its Irish manufacturing plant.

Medisize's extensive investment in its fully automated thermal welding technology further strengthens its reputation as a leader in the development and manufacture of single and multi chamber bags. Operational features of the new machinery include film feeding, peel-seal and tube welding, outline welding and cutting, two station printing, port feeding, along with stations for out feed and waste removal.

Medisize has been at the forefront of peel-able seal welding for over fifteen years partnering with global clients across the Pharma, Diagnostic and Biotech industries. Medisize is looking forward to entering into new partnerships with those clients seeking a professional and quality orientated contract manufacturer.
